

EYELID MASS REMOVAL

BEFORE

AFTER

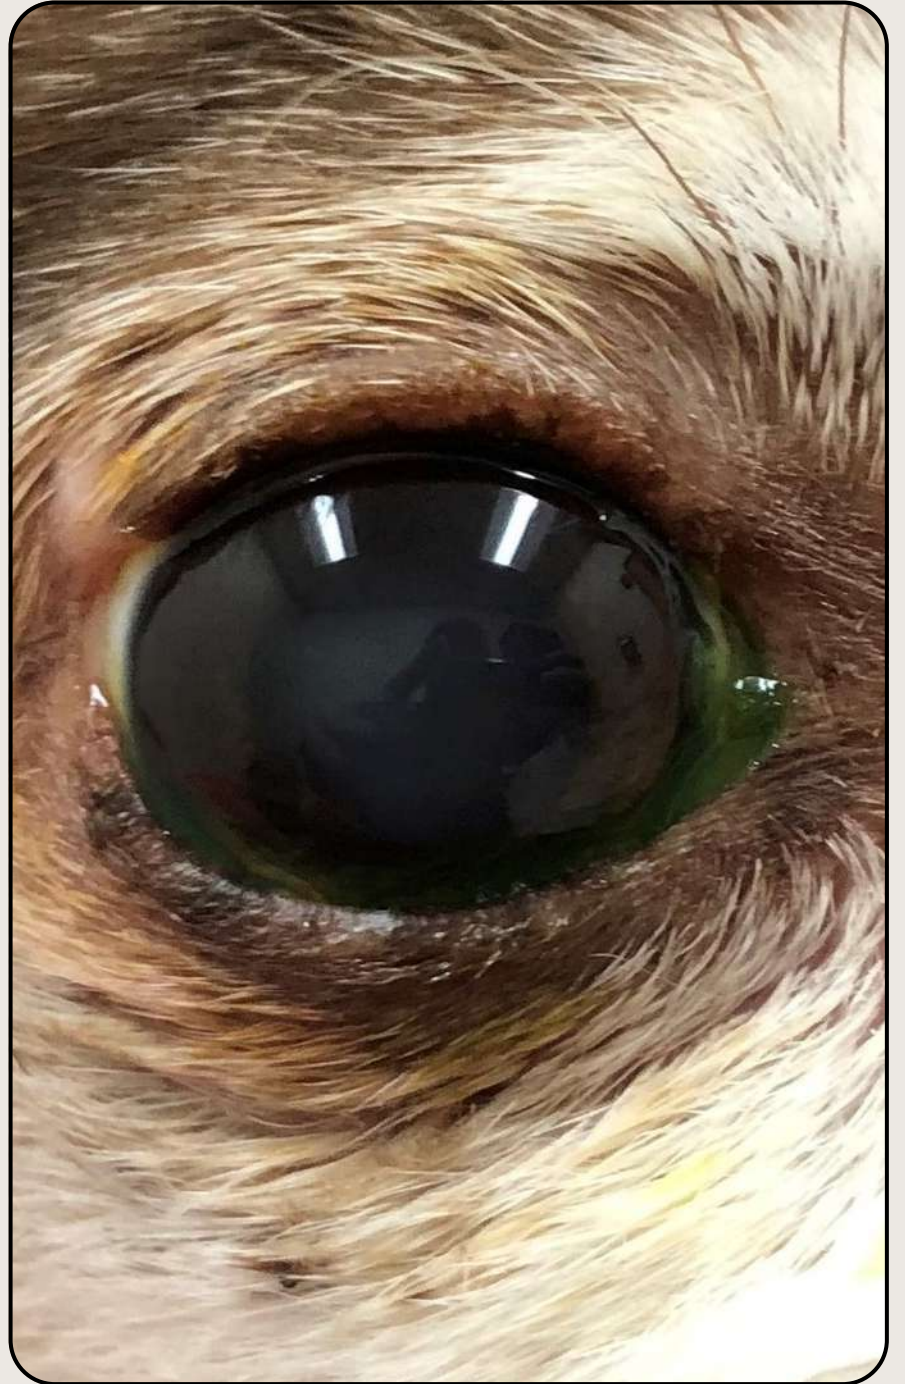

This retriever underwent surgical removal of a large lower eyelid mass. The resultant eyelid defect was sutured and healed without complication.

EYELID MASS REMOVAL

BEFORE

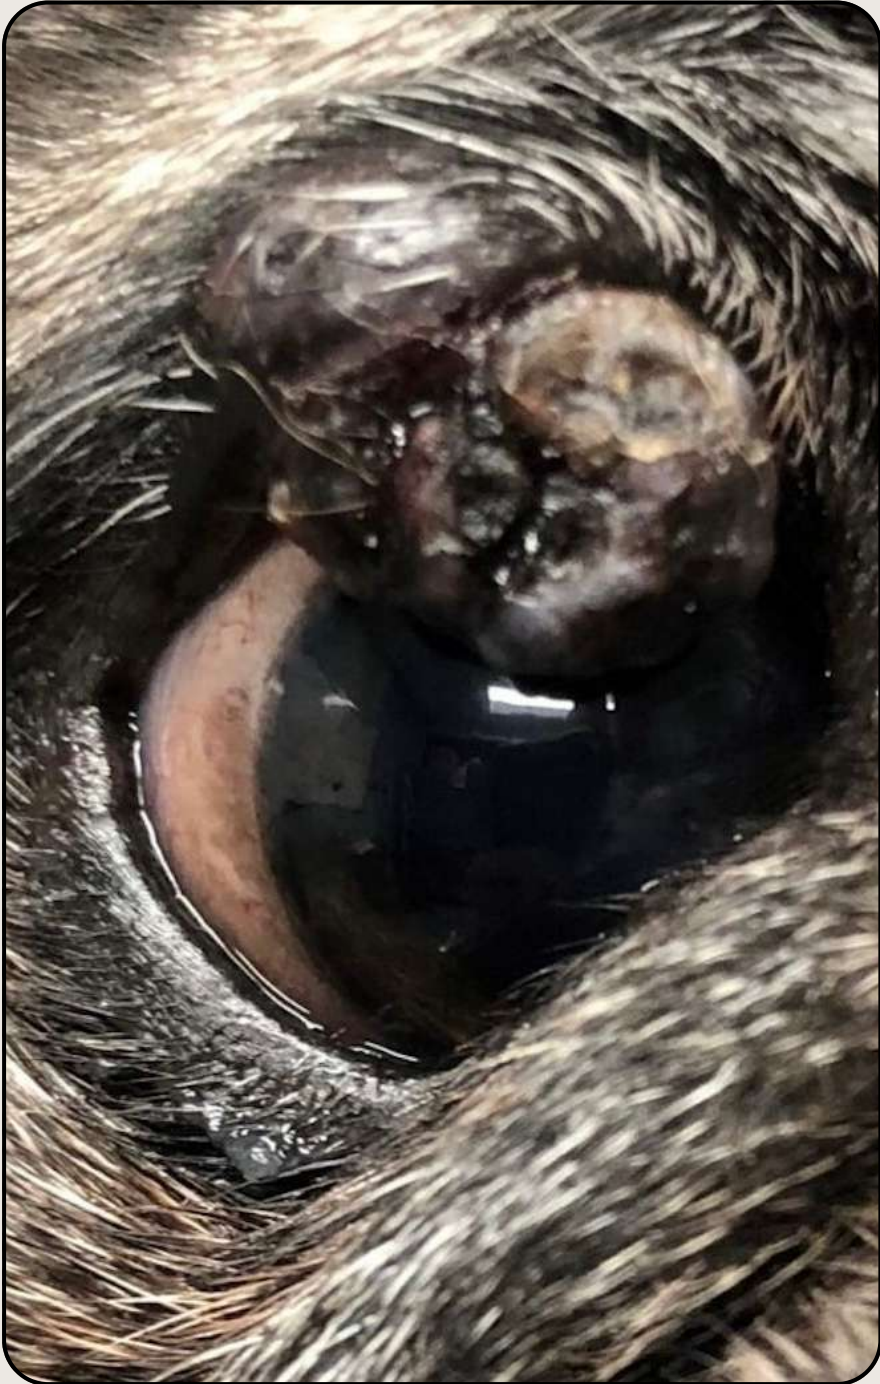

AFTER

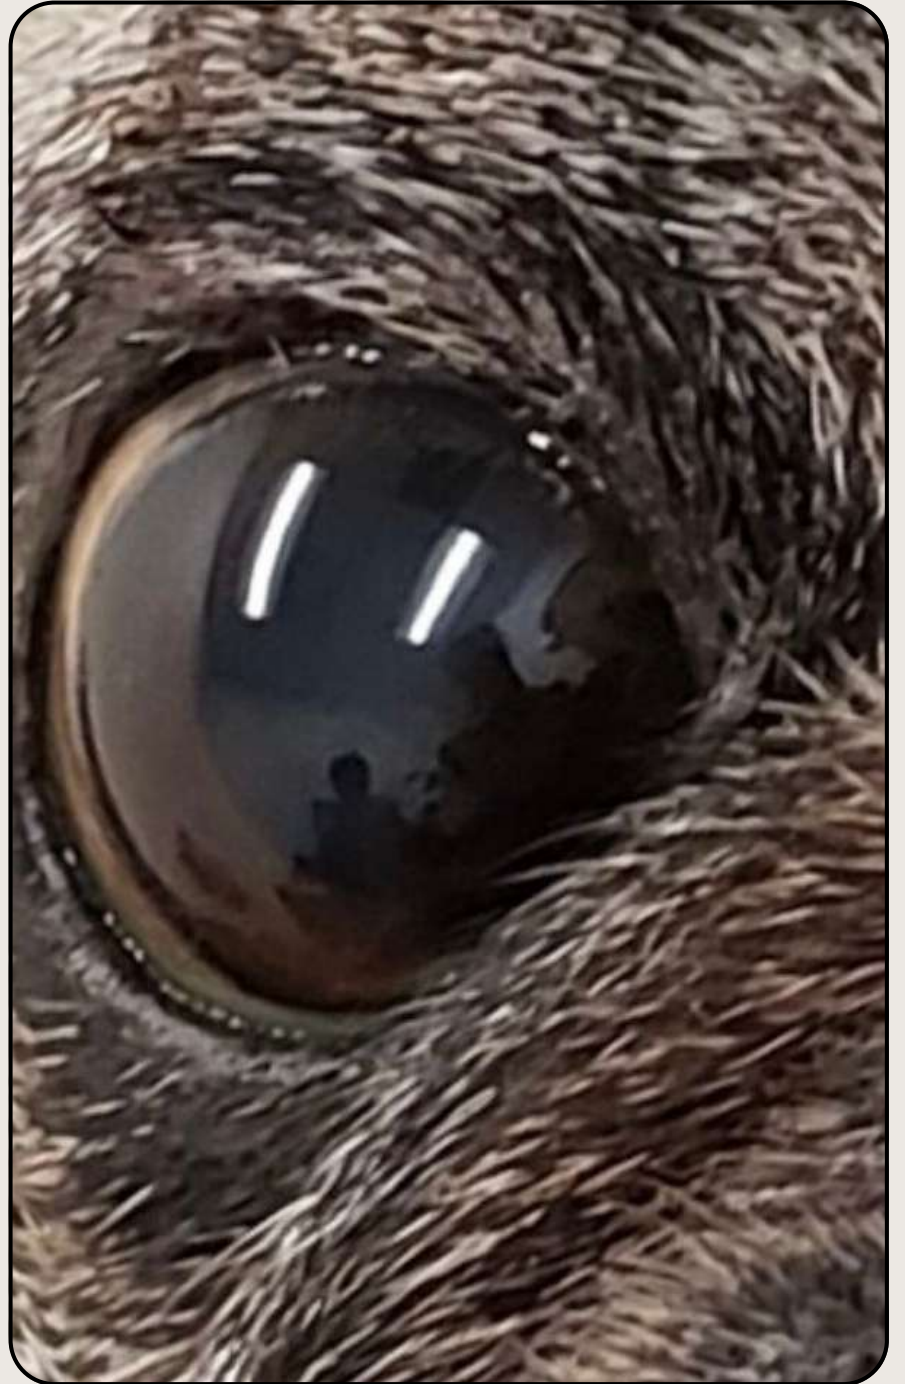

This dog underwent surgical removal of an upper eyelid mass. The resultant eyelid defect was sutured and healed without complication.

EYELID MASS REMOVAL

BEFORE

AFTER

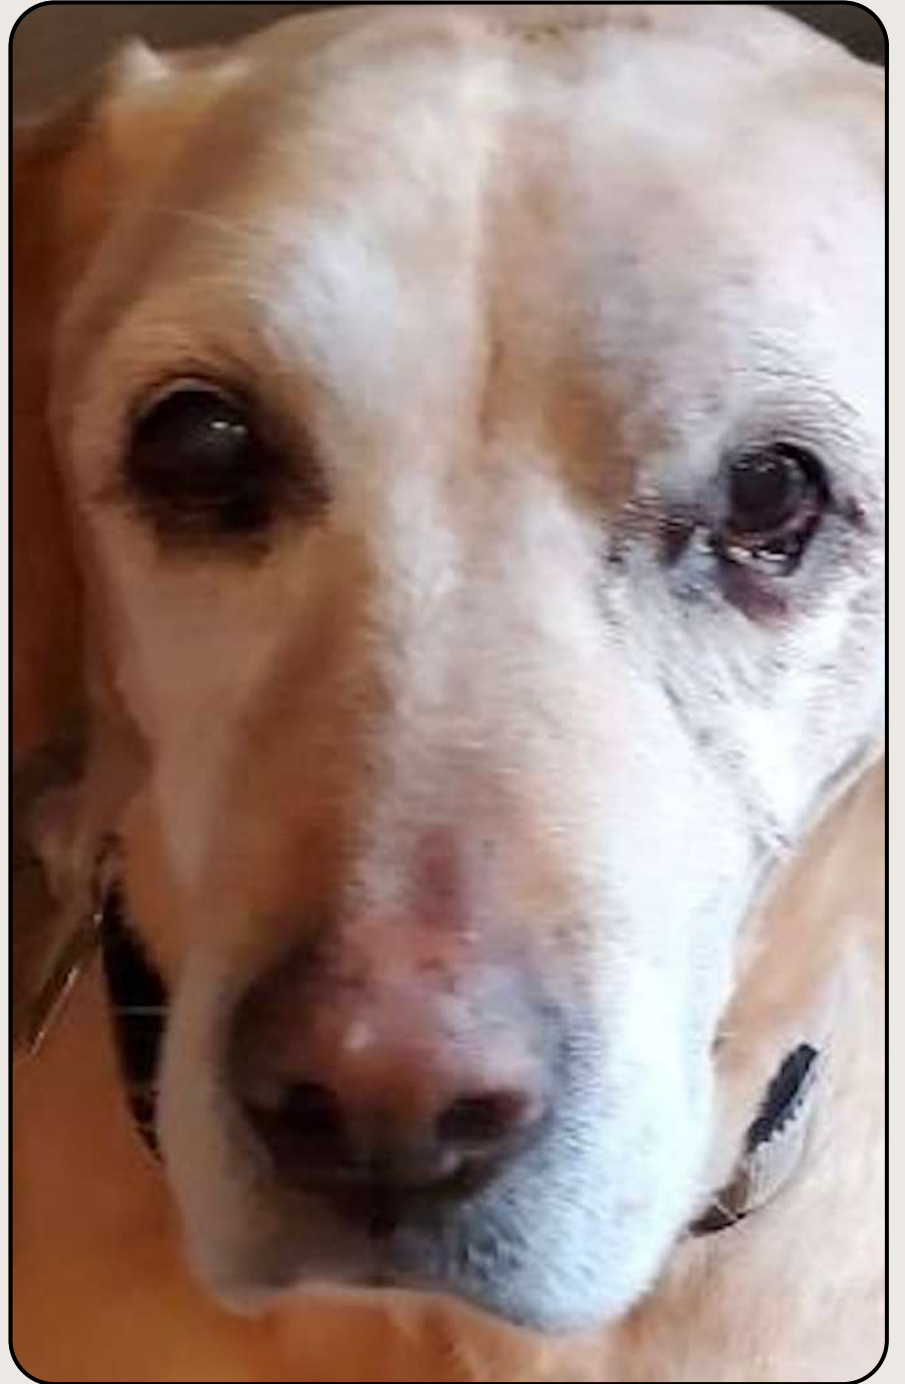

This pug underwent surgical removal of a large upper eyelid mass. The resultant eyelid defect was sutured and healed without complication.

EYELID MASS REMOVAL

BEFORE

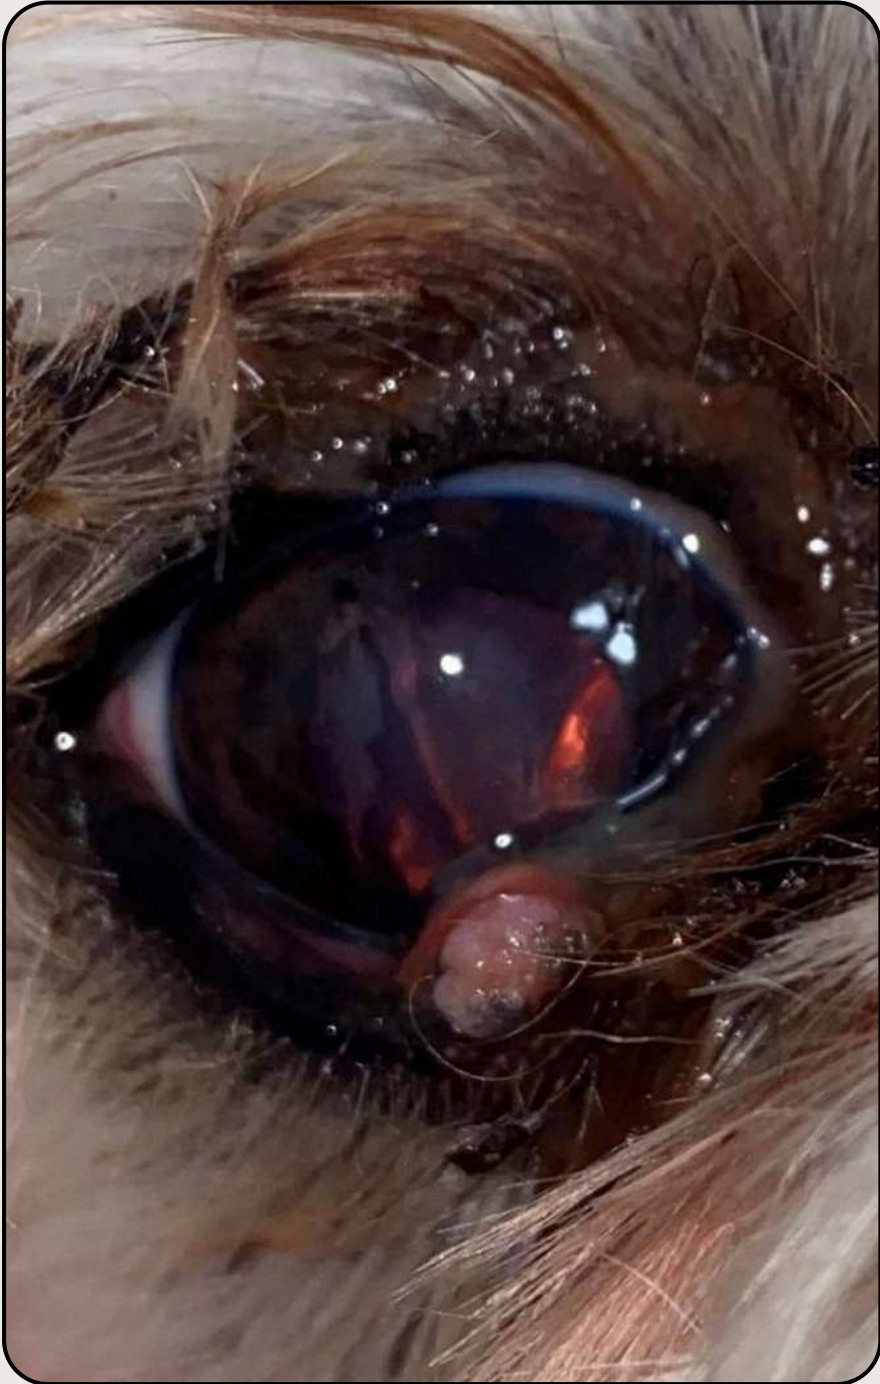

AFTER

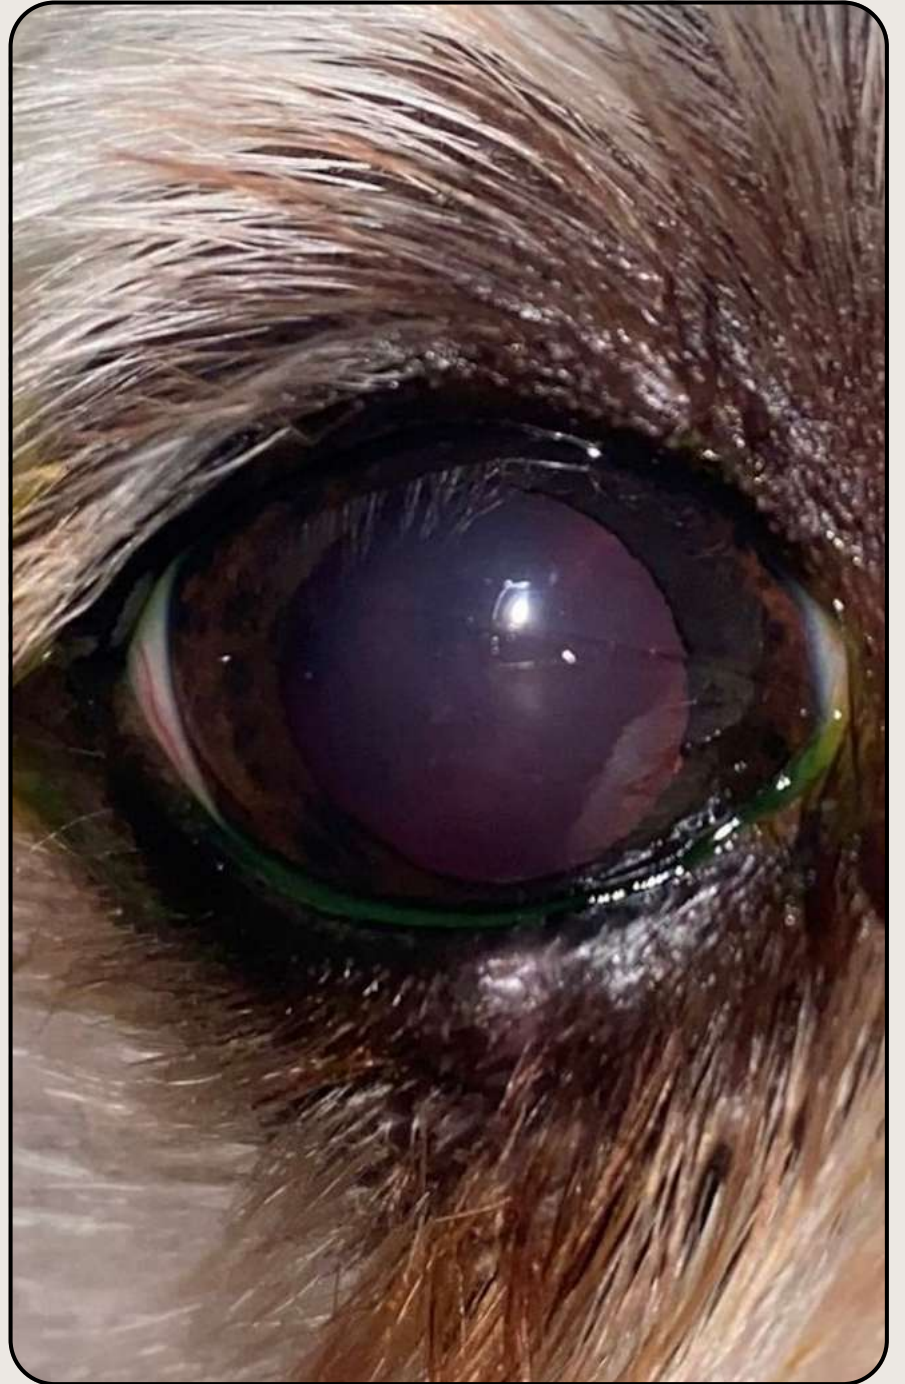

This senior retriever developed an unusually large tumor adherent bone distorting the eye and eyelid. The entire mass was meticulously dissected and removed, leaving only mild residual cosmetic imperfection.

EYELID MASS REMOVAL

BEFORE

AFTER

This dog underwent partial removal of the eyelid mass and adjunctive cryotherapy. Cryotherapy, although not typically effective alone, can be helpful in combination with excision.
