

# ENTROPION CORRECTION

BEFORE

AFTER

This young St. Bernard had excessive eyelid length combined with entropion (inward rolling of eyelids), resulting in chronic discomfort and discharge. Surgical eyelid shortening and eversion corrected the problem and relieved his clinical signs.

# ENTROPION CORRECTION

BEFORE

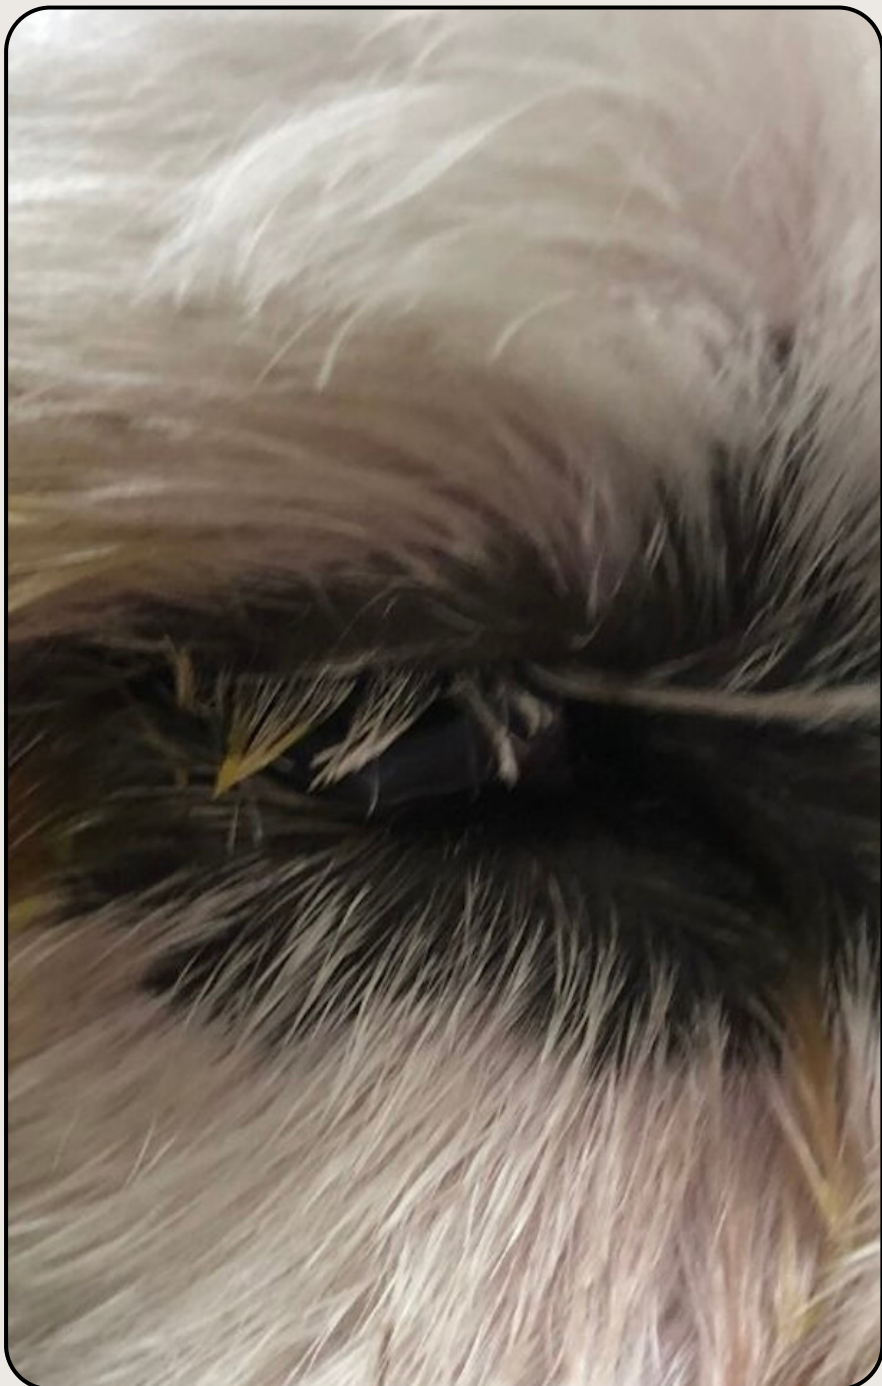

AFTER

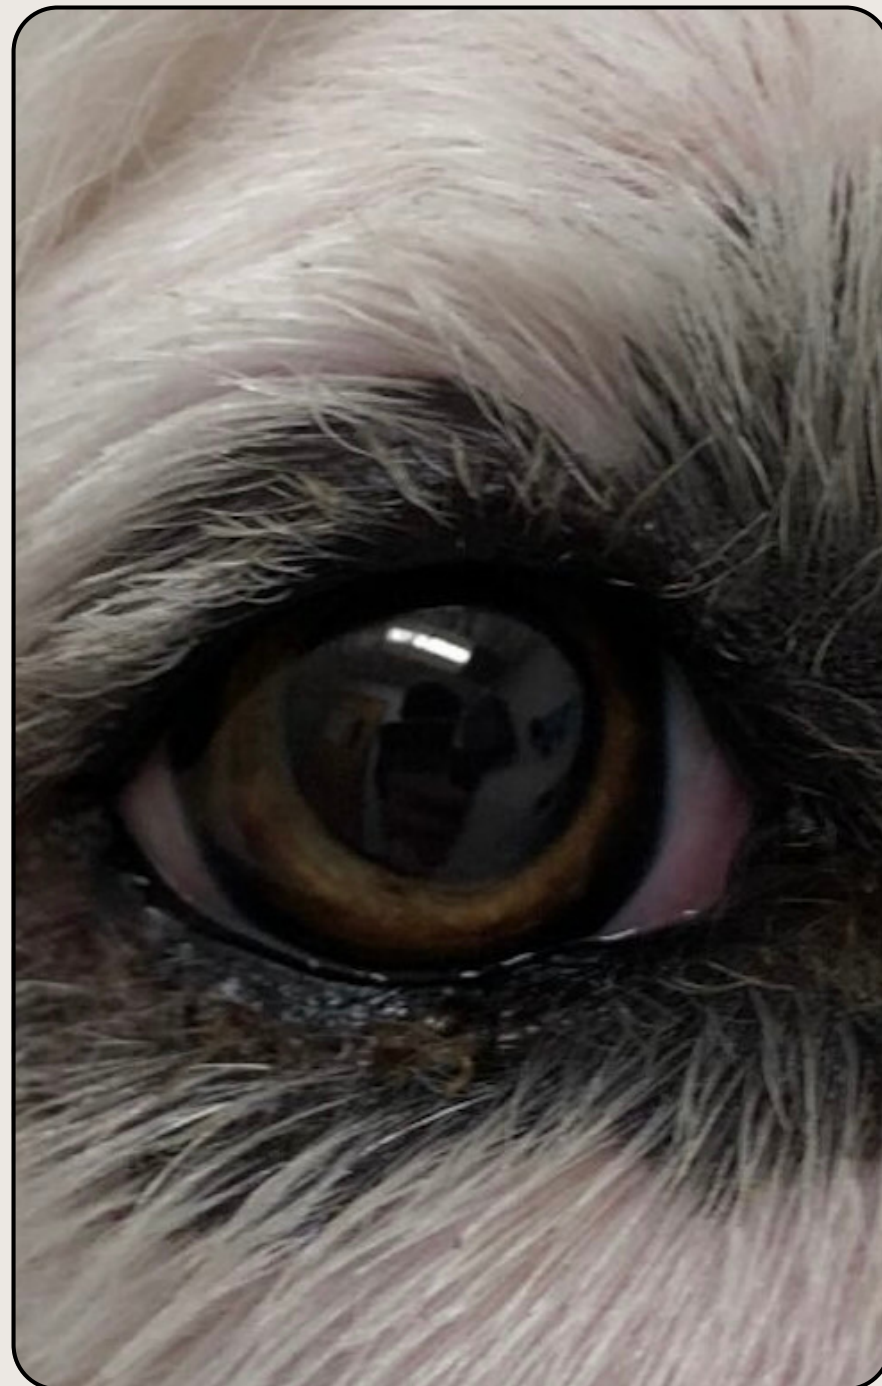

This young Maine Coon cat experienced entropion in only one eye. The eyelid position was corrected and prophylactic surgery was performed on the other eye to prevent problems.

# ENTROPION CORRECTION

BEFORE

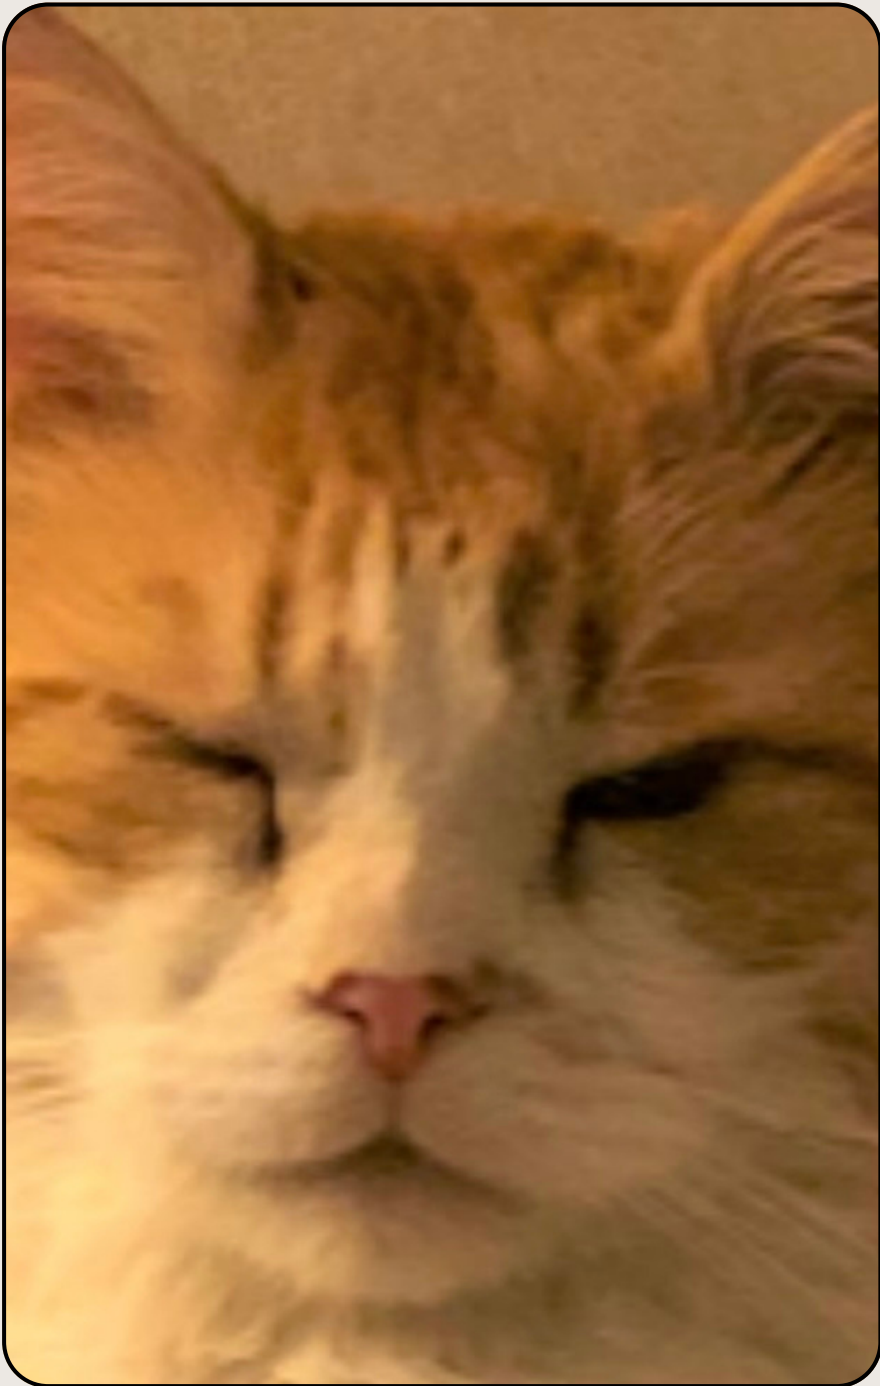

AFTER

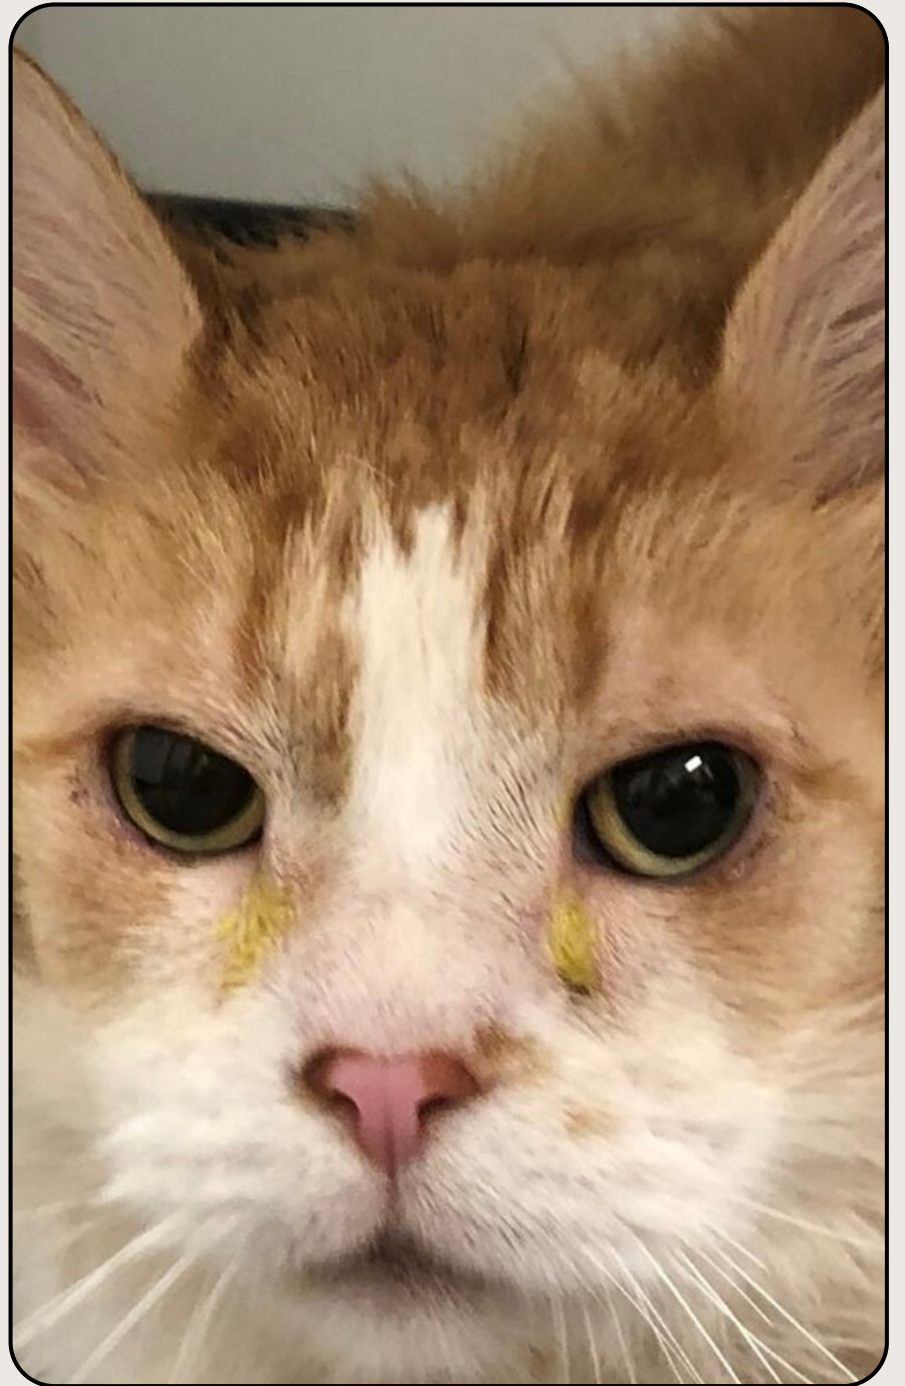

This young Goldendoodle experience chronic squinting and discharge due to entropion. Her eyelid position and length were surgically corrected, resolving the irritation.

# ENTROPION CORRECTION

BEFORE

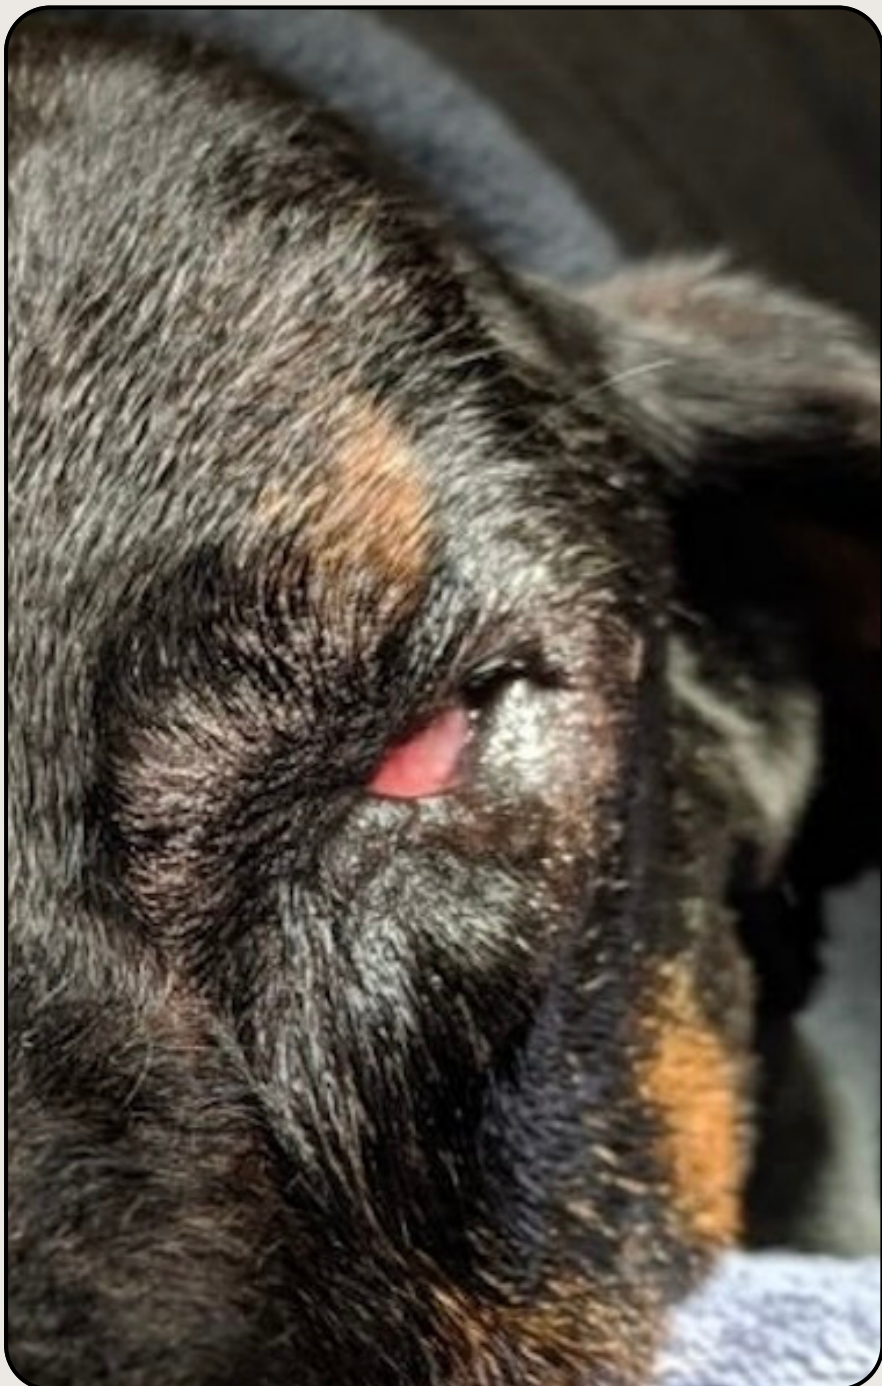

AFTER

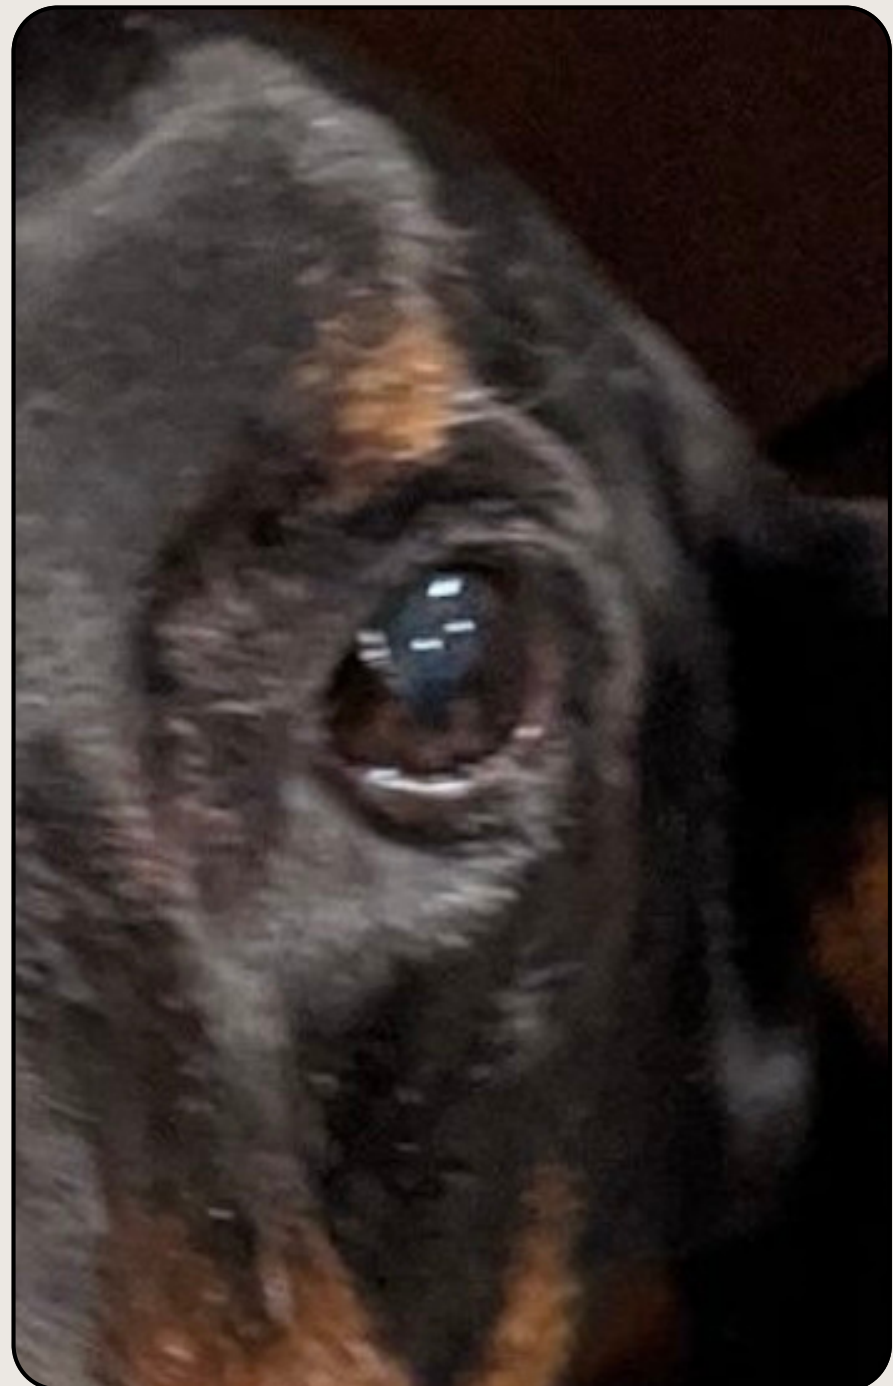

This senior cat developed entropion later in life, resulting in chronic discomfort. His eyelid position was corrected and he experienced no further irritation.

# ENTROPION CORRECTION

BEFORE

AFTER

This middle-aged Doberman Pinscher was adopted after a period of neglect. His severe entropion was corrected by shortening and everting his upper and lower eyelids.
